FUND
PERFORMANCE

CONCLUSION

Process

- Determine allocation process
 - Two levels of Mean-Variance Optimization, Black-Litterman
 - Adjustments, improvements, and views
- Select asset classes
 - Sectors/regions and commodities/REITs
- Gather data
 - What, where, how
- Build/modify allocation models
- Run models with data
 - Testing, quality control, evaluate output

EX-US MVO

US SECTORS –
BLACK LITTERMAN

COMMODITIES

REITS

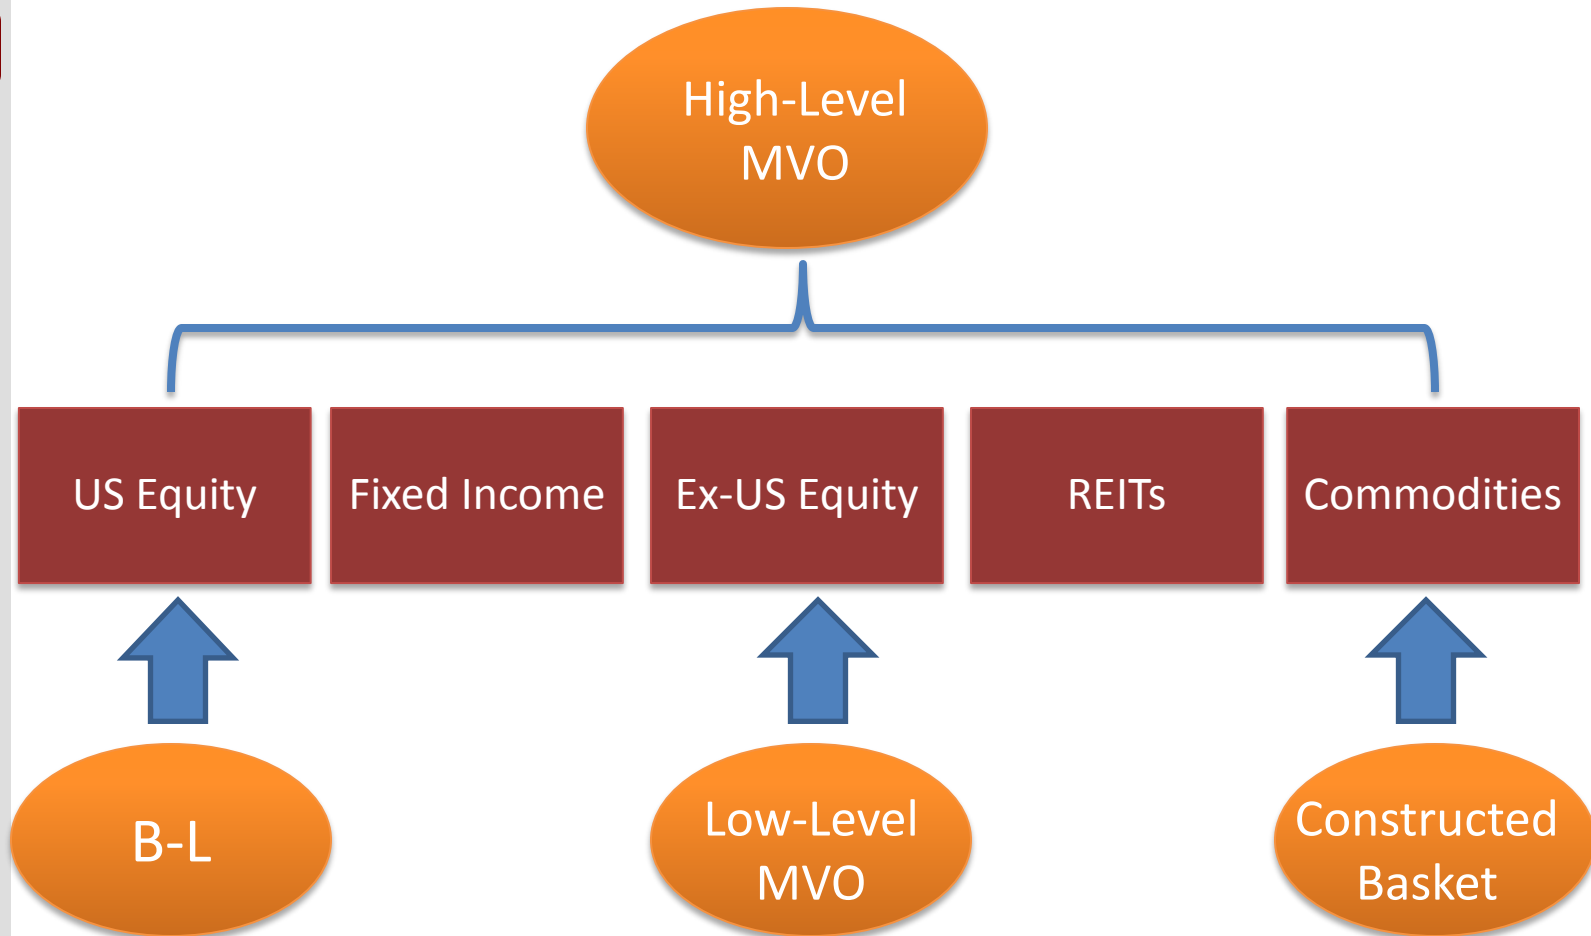

FIXED INCOME

INVESTMENTS

FUND
PERFORMANCE

CONCLUSION

Optimization Inputs

Returns

Correlation

Standard
Deviation

- Static MVOs are highly sensitive to the input data
- Historical data is not the best indicator for the future
- Correlations across asset classes have increased over the last decade
- Different methods to estimate volatility

INTRODUCTION

HIGH LEVEL MVO

EX-US MVO

US SECTORS –
BLACK LITTERMAN

COMMODITIES

REITS

FIXED INCOME

INVESTMENTS

FUND
PERFORMANCE

CONCLUSION

Resampling

Returns

- Reduces the sensitivity of the model
- Iterations of rolling sets of historical returns
- MVO performed on each iteration to construct a unique efficient frontier – maximizes the Sharpe ratio on each frontier
- Averaged the optimized portfolio over all frontiers
- Results in a more diversified portfolio

EX-US MVO

US SECTORS –
BLACK LITTERMAN

COMMODITIES

REITS

FIXED INCOME

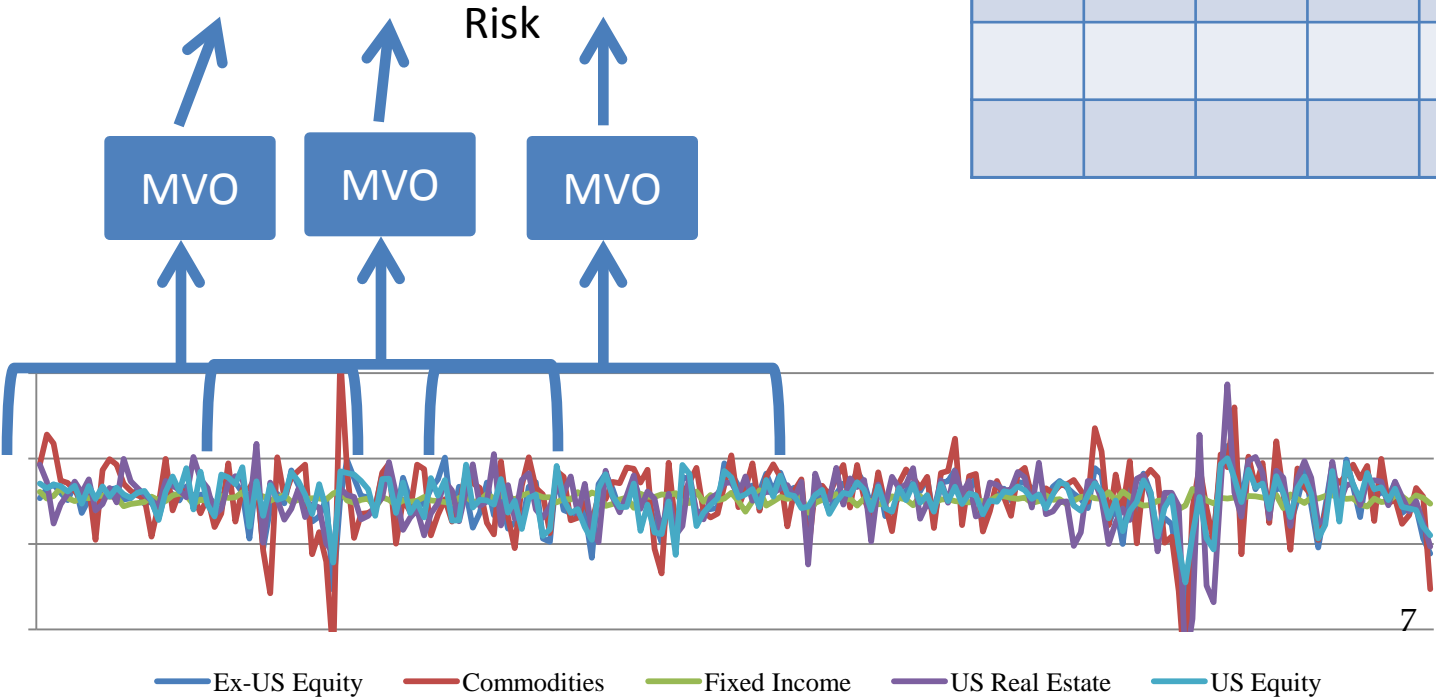

INVESTMENTS

FUND
PERFORMANCE

CONCLUSION

Weighted Covariance

Correlation

- Used an exponentially weighted moving average to account for increasing correlations across asset classes
- In an exponential weighting scheme, each observation is assigned a multiple of the weight assigned to its predecessor to better reflect current conditions
- Half-life: 3 years

PERFORMANCE

CONCLUSION

GARCH Volatility Forecast

Standard
Deviation

- Squared monthly return data tested positive for auto-correlations
- Garch volatility provides accurate forecasts of variances and covariances through its ability to model time-varying conditional variances
- Problem: only useful to forecast up to 3 periods

PERFORMANCE

CONCLUSION

Black-Litterman

- Benefits
 - Ability to incorporate investor views
 - Lessen the historical returns bias
- Procedure
 - Use a reverse optimization process to obtain excess equilibrium returns for each US Sector from market caps and covariances
 - Express under/outperform views
 - Run Black-Litterman optimizer to combine the two distributions

FUND
PERFORMANCE

CONCLUSION

Commodities

- Reason for investment
 - High correlation, diversification
- Restricted by charter constraints from direct investment
 - Solution: basket of stocks with high commodity exposure

INTRODUCTION

COMMODITIES

REITS

FIXED INCOME

INVESTMENTS

FUND
PERFORMANCE

CONCLUSION

Commodities Basket

- Company selection
 - Regressed companies against commodity and US Equity indices
 - Selection criteria
 - High correlation to commodities, low correlation to US Equity
- Ex. $R = \alpha + \beta(S\&P\ 500) + \beta(Oil) + \varepsilon$
- Incorporation into portfolio
 - Built a custom index using the selected firms

FUND
PERFORMANCE

CONCLUSION

Fixed Income

- Forego TIPS
 - Inflation expectations low
 - 5 year breakeven rate = 1.76% as of 10/24/11
- Intermediate over short term
 - Interest rates to stay low
- Corporate vs. Treasury
- Chose iShares GVI (Intermediate Bond Fund)

ETF Selection

Country ETFs
iShares MSCI Japan Index
Vanguard MSCI Europe
Vanguard MSCI Emerging Markets
iShares MSCI New Zealand
iShares MSCI Canada Index
iShares MSCI Australia Index
iShares MSCI Hong Kong Index
iShares MSCI Singapore Index
iShares MSCI Israel

Sector ETFs
Vanguard Consumer Discretionary
Vanguard Consumer Staples
Vanguard Energy
Vanguard Financials
Vanguard Healthcare
Vanguard Industrials
Vanguard Materials
Vanguard Technology
Vanguard Telecom
Vanguard Utilities

General Considerations

- Holdings overlap
- Tracking error
- Liquidity
- Composition
- Expense ratio
- Prior holdings

What We Learned

- Strengths and weaknesses of models
- There is no right answer
- Details, details, details
- There are always constraints
